Combined gravitational lensing and stellar dynamics analysis of early-type galaxies

Proefschrift

ter verkrijging van het doctoraat in de
Wiskunde en Natuurwetenschappen
aan de Rijksuniversiteit Groningen
op gezag van de
Rector Magnificus, dr. F. Zwarts,
in het openbaar te verdedigen op
vrijdag 27 maart 2009
om 16.15 uur

door

Matteo Barnabè

geboren op 13 oktober 1980
te Faenza, Italië

Contents

Chapter 1: Introduction	9
1.1 Stellar dynamics	10
1.1.1 Schwarzschild's methods	13
1.2 Gravitational lensing	13
1.3 Early-type galaxies	16
1.3.1 Formation and evolution of early-type galaxies	19
1.4 This Thesis	19
1.4.1 Outline of the Thesis	20
 Chapter 2: The SLACS Survey	 23
2.1 Overview of the SLACS Survey	23
2.1.1 Selection of candidate lenses	24
2.1.2 Image processing	26
2.2 Main results	27
2.2.1 The total density profile and its redshift evolution	27
2.2.2 The mass fundamental plane	30
2.2.3 Dark matter in SLACS galaxies	32
 Chapter 3: Combining gravitational lensing and stellar dynamics	 33
3.1 Introduction	34
3.2 A Bayesian approach	37
3.2.1 Maximizing the posterior: Linear optimization	39
3.2.2 Maximizing the evidence: non linear optimization	40
3.3 The Method	42
3.3.1 The CAULDRON algorithm	43
3.4 Gravitational lensing	46

3.5	Dynamics	48
3.5.1	The “dynamics operator” by means of a two-integral axisymmetric Schwarzschild method	49
3.6	Demonstration of the method	51
3.6.1	The test setup	52
3.6.2	Demonstration of the linear reconstruction	53
3.6.3	Non linear optimization	55
3.6.4	Model uncertainties	60
3.7	Conclusions and future work	61
3.7.1	The CAULDRON algorithm	62
3.7.2	Future work	63
3.A	Regularization	65
3.B	Normalization: setting the scale of lensing	65
3.C	MCMC implementation of the Schwarzschild method	66
3.D	Normalization of the TICs weights	68
3.E	The evidence formula	70
3.F	The deflection angle for Evans’ power-law galaxies	70
Chapter 4: Crash-testing the CAULDRON code		73
4.1	Introduction	74
4.2	The CAULDRON algorithm	76
4.3	The N-body system	78
4.4	Construction of the observables	80
4.5	Analysis and results	82
4.5.1	Recovered structure	83
4.5.2	Total mass distribution and dark matter fraction	86
4.5.3	Reconstructed source	89
4.5.4	Recovered dynamical quantities	93
4.5.5	Uncertainties	95
4.6	Discussion and conclusions	97
Chapter 5: Phase-space analysis of SDSS J2321		101
5.1	Introduction	102
5.2	Observations	105
5.2.1	Integral-field spectroscopy	105
5.2.2	<i>HST</i> imaging	106
5.3	IFU data analysis	106
5.3.1	Data reduction	106
5.3.2	Kinematic analysis	109
5.3.3	Results from the observed stellar kinematics	110
5.4	Joint gravitational lensing and stellar dynamics analysis	114
5.4.1	Mass model and overview of the joint analysis	114
5.4.2	Results	118
5.4.3	Inferences from the phase-space distribution	120
5.4.4	Uncertainties	124

5.5	Breaking degeneracies: oblateness and inclination	125
5.6	Discussion and conclusions	127
Chapter 6: Combined analysis of early-type galaxies at $z = 0.08 - 0.33$		131
6.1	Introduction	132
6.2	Overview of the data sets	134
6.2.1	Spectroscopy	134
6.2.2	Imaging	135
6.3	Combining lensing and dynamics	136
6.3.1	Overview of the CAULDRON algorithm	136
6.3.2	The galaxy model	139
6.4	Analysis and results	144
6.4.1	Best model reconstruction	144
6.4.2	Mass distribution and dark matter fraction	147
6.4.3	Error analysis	150
6.4.4	The density profile of the ensemble	151
6.4.5	Axial ratio of the density distribution	152
6.5	Recovered dynamical structure	153
6.5.1	Anisotropy parameters	155
6.5.2	The global and local v/σ	156
6.5.3	Angular momentum	157
6.6	Summary and conclusions	159
Chapter 7: Conclusions and outlook		167
7.1	Results	167
7.1.1	Combining gravitational lensing and stellar dynamics	168
7.1.2	Dissecting early-type galaxies beyond the local Universe	170
7.2	Future outlook	171
7.3	Conclusive remarks	173
Bibliography		175
Nederlandse Samenvatting		181
Compendio della Tesi		187
